Professional Summary

Recent Computer Science graduate seeking internship and entry-level opportunities in data analytics, machine learning, applied AI, and software development. Portfolio projects demonstrate Python and SQL data preparation, Power BI KPI reporting, scikit-learn model evaluation, document retrieval with citations, and tested applications built with Java, Spring Boot, FastAPI, TypeScript, and Next.js.

Technical Skills

Languages: Python, SQL, Java, TypeScript, JavaScript

Data and Business Intelligence: pandas, DuckDB, Parquet, Power Query, DAX, Power BI, Matplotlib

Machine Learning and AI: scikit-learn, regression, time-series validation, TF-IDF, information retrieval, natural language processing, ranking, model evaluation

Backend, Web, and Tools: Next.js, React, Spring Boot, FastAPI, REST APIs, Git, GitHub Actions, Vercel, pytest, JUnit, Vitest

Projects

Indian Retail Storefront and Order Management Platform

June 2026

GitHub: github.com/divyarachala1812/sunshine-retail-platform

- Built an Indian retail website to keep product search, stock, cart, payment results, delivery tracking, order history, and customer support consistent from browsing through checkout.
- Used Next.js, TypeScript, Java 17, Spring Boot, Python, FastAPI, and Vercel for a searchable 50-product catalogue; implemented three checkout outcomes and eight delivery stages, verified by 26 automated tests.

Indian Farmer Scheme Information Assistant

March 2026

GitHub: github.com/divyarachala1812/krishiguide-scheme-assistant

- Built a search assistant that helps users find reliable farmer-scheme information distributed across official documents and returns supporting source citations with each answer.
- Used Python, document chunking, word and character TF-IDF, and ranked retrieval across 406 chunks from seven official sources; evaluated 18 questions with Hit@1 of 1.000 and 100% citation completeness.

Next-Day Air Quality Forecasting for Indian Metro Cities

December 2025

GitHub: github.com/divyarachala1812/airwise-metro-forecasting

- Built a next-day PM2.5 forecasting system for Delhi, Mumbai, and Hyderabad to support earlier air-quality monitoring without allowing future dates to enter model training.
- Used Python, pandas, scikit-learn, lag and weather features, and chronological validation on 3,747 city-day rows; achieved MAE 8.50, R2 0.851, and alert recall 0.871 on 1,095 unseen rows.

Delhi NCR Ride Operations and KPI Analytics

May 2025

GitHub: github.com/divyarachala1812/ridepulse-operations-analytics

- Converted 160,609 inconsistent Delhi NCR ride-booking rows into 148,767 unique bookings so demand, completion, cancellation, service, and revenue KPIs could be measured consistently.
- Used Python, SQL, DuckDB, Power Query, DAX, and Power BI to create 15 analytical tables and a six-page dashboard package; passed 12 warehouse checks and three Python tests.

Education

Bachelor of Technology in Computer Science

June 2026

Malla Reddy Institute of Engineering and Technology, India
